Verizon and Versa Networks help deliver secure networking

Enabling digital transformation with SASE Management

Organizations of all sizes are under pressure to stay ahead of ever-increasing customer expectations and developments in technology. They need to be able to innovate, scale, keep information secure and deploy at speed without incurring high costs. That's why many organizations are now looking into the benefits of merging the management of Software Defined WAN (SD WAN) and managed cloud security services that support zero trust network access and the need for dynamic network security.

The Solution: Verizon and Versa Networks.

Verizon's Managed SASE coupled with secure SD WAN provided by Versa Software Defined Secure Branch provide universally distributed, identity-centric networking and management of a security platform that helps ensure that end-users and devices—across all locations—are securely connected.

When Verizon delivers Managed SASE and Software Defined Secure Branch with Versa Networks, we create a custom solution so you can drive the outcomes of your business needs on a platform that provides a managed, full-featured SD WAN with management of comprehensive security, advanced routing, genuine multi-tenancy, and sophisticated analytics delivered via one software stack. The solution helps drive down costs while simultaneously future-proofing your network and security infrastructure for the long term.

Why Verizon and Versa Networks?

As partners in your success, Verizon and Versa Networks provide:

- A smarter and more automated SD WAN offering with critical network security services provided by a secure web gateway and zero-trust network access

- Incident management on cloud security instances
- Customer-initiated policy change management for the SASE package security components
- Simplified management and policy enforcement for all users and devices across your network
- Support provided by Verizon's Network Operations Center (NOC) and Security Operations Center (SOC) teams
- A feature-rich, scalable, yet simple to use software platform to implement many different enterprise use cases, including:
  – Comprehensive SASE Management for on-premises and cloud implementations
  – SASE Management for enterprises with layered security
 – Full SASE Management on-premises for enterprise power branches

Security options include:

- Intrusion Detection and Prevention Services (IDS/IPS)
- Data Loss Prevention (DLP)
- Distributed Denial of Service (DDoS) protection
- Anti-spam, anti-malware, and URL filtering

Verizon customers also benefit from:

- Managed end-to-end services
- Flexible and rapid deployment and feature licensing options
- Dramatically reduced new site deployment times with Low Touch Provisioning
- Business agility through rapid service delivery and end-to-end enterprise orchestration
- Verizon Enterprise Center with advanced 'Drill down' reporting, analytics, and vendor API integration
- Direct Versa Analytics access
- One point of contact across the entire solution
